Forms in scope

Site	Form	Where it goes today
NurseGen	I want to work	Opens the visitor's email app, addressed to enquiries@nursegen.com.au
NurseGen	I need workforce	Opens the visitor's email app, addressed to enquiries@nursegen.com.au
NurseGen	Subscribe	Nowhere. The button is switched off
HealthGen	Contact	Opens the visitor's email app, addressed to operations@healthgen.io
HealthGen	Subscribe	Nowhere. The button is switched off
CareGen	Book a discovery call	Opens the visitor's email app, addressed to operations@healthgen.io

Making them proper forms

Today every form opens the visitor's email app, which fails silently if they have none set up, and shows a "thank you" before anything is sent. These sites are static pages on GitHub Pages with no server, so a real form needs an outside service to receive the submission. The main options:

Option	How it works	Best for
Form service (for example Formspree or Web3Forms)	The form posts to the service, which emails each submission to the right inbox and may keep a copy. Setup is a few lines of code per form and no server.	The four contact-style forms: I want to work, I need workforce, Contact and Book a discovery call
Microsoft 365 (Power Automate or Microsoft Forms)	Submissions go into your own Microsoft 365, for example a shared mailbox, a Teams message or a SharePoint list. IT needs to set up the flow.	Keeping applicant and client details inside your own tenant
Mailchimp signup form	Mailchimp provides an embeddable subscribe form that adds people to an audience. Your EDM templates already use Mailchimp.	The two Subscribe buttons

Suggested approach: use a form service for the contact-style forms and a Mailchimp signup for Subscribe. Choose the Microsoft 365 route if you would rather keep job applicants' details inside your own systems.

Whichever you choose, build in these basics:

- Show the thank-you message only after the submission is confirmed, and show an error with a fallback email address if it fails.
- Add spam protection, since none of the forms has any today.
- Update the privacy policy to name any third-party service that stores submissions, especially for job applicants.
